Rev. 09/19/00-o2L/H & Dwgs. Rev. 02/28/01 (Warranty) – Rev 03/21/03 (TWR Logo Dwgs)

GENERAL INFORMATION

The TWR Model AA2/3MB Controller is for A2 lighting of towers 351' to 700' AGL in accordance with the FAA Advisory Circular 70/7460-1J. One (1) beacon should be placed at the top and two (2) beacons at mid-level. Obstruction lights should be placed at the ¾ and ¼ intervals with respect to overall tower height.

The flash rate of the beacons is 30 per minute. The beacons flash synchronized to one another. The sidelights burn steady.

A by-pass switch (SW1) allows the Controller to be turned on during daylight hours without covering the photocell. This is particularly helpful since the Controller can be mounted indoors while the photocell is outdoors. SW1 can be operated by pulling out on the plunger.

Each beacon requires two (2) 620 watt or two (2) 700 watt, 120V bulbs. The use of any other bulb may give a false beacon lamp burnout alarm. TWR recommends that you use only these bulbs. Do not try to use 130V bulbs. Each sidelight requires one (1) 116 watt, 120V bulb (620PS40P, 700PS40P, and 116A21TS).

The photocell is the three (3) blade, twist to lock, type.

Power supplied to the Controller shall be 120/240V, three (3) wire, single phase.

The Controller housing is rated at NEMA 4X. It is suitable for indoor or outdoor mounting.

Controller functions that are monitored by remote alarms in the form of dry contact closures (Form C) are as follows:

POWER FAILURE Monitors 120V AC to the Controller. Alarms in the event of power failure or tripped circuit breaker.

LIGHTS "ON" Gives an indication whenever the Controller is activated.

I.MANUALS.A-SER.AA23MB Rev. 10/02/98, Rev. 06-01-99 Rev. 09-30-99-Dwg. Rev. 09/19/00-o2L/H & Dwgs.

Rev. 02/28/01 (Warranty) - Rev 03/21/03 (TWR Logo Dwgs)

BEACONS Will give an alarm in the event of one (1) or both

bulbs failing or the flasher stalling.

FLASHER FAILURE Will give an alarm in the event of failure of flasher.

OBSTRUCTION LIGHTS Will give an alarm when one (1) of three (3)

sidelights fail.

INSTALLATION INSTRUCTIONS

MOUNTING THE CONTROL CABINET 1.0

(Refer to Drawing 1135-R)

- The power supply control cabinet can be located at the base of 1.1 the structure or in an equipment building. Mounting footprints are shown on Drawing 1135-R. Power wiring to the control cabinet should be in accordance with local methods and National Electrical Codes (NEC).
 - 1.1.1 If the control cabinet is mounted inside an equipment building, the photocell should be mounted vertically on ½" conduit outside the building above the eaves facing north. Wiring from the photocell socket to the control cabinet should consist of one (1) each, red, black, and white wires. The white wire is connected to the socket terminal marked "COM," the black wire is connected to the socket terminal marked "B," and the red wire is connected to the socket terminal marked "R." These socket connections are made by using .25" quick connect terminals which must be crimped to the wires. As above, the photocell should be positioned so that it does not "see" ambient light, which would prevent it from switching to the nightmode.
 - 1.1.2 If the control cabinet is mounted outside an equipment building, the photocell should be mounted vertically on $\frac{1}{2}$ " conduit so the photocell is above the control cabinet. Care must be taken to assure that the photocell does not "see" any ambient light that would prevent it from switching into the nightmode. The photocell wiring is the same as in 1.1.1.

I.MANUALS.A-SER.AA23MB Rev. 10/02/98. Rev. 06-01-99 Rev. 09-30-99-Dwg.

Rev. 09/19/00-o2L/H & Dwgs.

1.2 The wiring from the photocell, the service breaker, the red incandescent beacons, and the sidelights should enter the control cabinet through the watertight connectors in the bottom of the cabinet. Inside the cabinet, the connections will be made on the terminal strips and circuit breakers located at the bottom of the chassis. These connections are made as follows:

2.0 EXTERNAL PHOTOCELL WIRING

(Refer to Drawing 1135-R)

- 2.1 Connect the <u>BLACK</u> wire from the photocell to terminal block TB2 marked "L2."
- 2.2 Connect the <u>RED</u> wire from the photocell to terminal block TB2 marked "SSR."
- 2.3 Connect the <u>WHITE</u> wire from the photocell to terminal block TB2 marked "N."

3.0 POWER WIRING (Refer to Drawing 1135-R)

- 3.1 Power wiring to the control cabinet should be in accordance with local methods and National Electrical Codes.
- 3.2 Circuit breaker needs to be a two (2) pole common trip rated at 40 amps.
- 3.3 Connect incoming 120V AC "Hot #1" to terminal block TB1 marked "L1."
- 3.4 Connect incoming 120V AC "Hot #2" to terminal block TB1 marked "L2."
- 3.5 Connect the neutral wire(s) to one (1) of the terminal blocks on TB1 marked "N."
- 3.6 Connect the AC ground to the aluminum mounting plate.

4.0 RED BEACON AND SIDELIGHT WIRING

(Refer to Drawings 1135-R, 261-31B, and 261-32B)

I.MANUALS.A-SER.AA23MB Rev. 10/02/98, Rev. 06-01-99 Rev. 09-30-99-Dwg. Rev. 09/19/00-02L/H & Dwgs.

- 4.1 Connect the <u>BLACK</u> wire from Beacon #1 to the circuit breaker marked "B1."
- 4.2 Connect the first <u>BLUE</u> wire from Beacon #2 to the circuit breaker marked "B2."
- 4.3 Connect the second <u>BLUE</u> wire from Beacon #3 to the circuit breaker marked "B3."
- 4.4 Connect the <u>RED</u> wire from sidelight group #1 to the circuit breaker marked "S1."
- 4.5 Connect the <u>YELLOW</u> wire from sidelight group #2 to the circuit breaker marked "S2."
- 4.6 Connect the <u>WHITE</u> neutral wire(s) to one (1) or more of the terminals marked "N."

5.0 RED BEACON AND SIDELIGHT ALARM WIRING

(Refer to Drawings 1135-R and 1135-S)

5.1 Alarm relays K1-K5, and alarm Modules M2, M4, M6, M7, and M8, are provided for independent contact closures for: Power Failure, Lights "On," B1 Flasher Failure, B2 Flasher Failure, B3 Flasher Failure, B1 Lamp Burnout, B2 Lamp Burnout, B3 Lamp Burnout, S1 Lamp Burnout, and S2 Lamp Burnout.

5.2 Alarm Wiring: To utilize all of the red light alarms, the customer will need ten (10) pair of wires to interface with his alarm device. One (1) wire from each of the ten (10) pair will terminate at the points marking common (C). The remaining wire from each pair will terminate as follows:

5.2.1	Power Failure Alarm:	Connect to relay K1, terminal #3, for normally open (OR) terminal #6, for normally closed monitoring.
5.2.2	Lights "On" Alarm:	Connect to relay K2, terminal #3, for normally open (OR) terminal #6, for normally closed monitoring.
5.2.3	B1 Flasher Failure:	Connect to relay K3, terminal #6, for normally open (OR) terminal #3, for normally closed monitoring.
5.2.4	B2 Flasher Failure:	Connect to relay K4, terminal #6, for normally open (OR) terminal #3, for normally closed monitoring.
5.2.5	B3 Flasher Failure:	Connect to relay K5, terminal #6, for normally open (OR) terminal #3, for normally closed monitoring.
5.2.6	B1 Lamp Burnout:	Connect to relay M2, terminal T6, for normally open (OR) terminal #7, for normally closed monitoring.
5.2.7	B2 Lamp Burnout:	Connect to relay M4, terminal T6, for normally open (OR) terminal #7, for normally closed monitoring.
5.2.8	B3 Lamp Burnout:	Connect to relay M6, terminal T6, for normally open (OR) terminal T7, for normally closed monitoring.
5.2.9	S1 Lamp Burnout:	Connect to relay M7, terminal T5, for normally open (OR) terminal T6, for normally closed monitoring.
	S1 Lamp Burnout:	Connect to relay M8, terminal T5, for normally open (OR) terminal T6, for normally closed monitoring.
R.AA23MB v. 06-01-99		

I.MANUALS.A-SER. Rev. 10/02/98, Rev. 06-01-99 Rev. 09-30-99-Dwg. Rev. 09/19/00-02L/H & Dwgs. Rev. 02/28/01 (Warranty) – Rev 03/21/03 (TWR Logo Dwgs)

- 5.3 Alarm Testing: To test alarms, follow the procedures using an "ohm" meter between alarm common and alarm points.
 - 5.3.1 Power Failure: Pull circuit breaker at electrical

panel.

5.3.2 Lights "On": Operate photocell by-pass switch

SW1 or cover the photocell. NOTE: (Indication will be delayed 8 – 10 seconds for all the beacon and sidelight relays to position

themselves.)

5.3.3 Beacon and Sidelights: Trip breakers on the controller panel.

THEORY OF OPERATION

THEORY OF OPERATION **6.0**

6.1 **POWER SUPPLY**

120/240V AC enters the Controller from the circuit breaker panel. Lines L1 and L2 sit at the PRD, waiting to be switched. and also keeps the power failure relay K1 energized. When the 102FAA photocell is activated. Line L2 energizes the coil of the PRD and K2 "Lights On" relay. This also can be accomplished by using the photocell by-pass switch (SW1).

6.2 **SIDELIGHTS**

Line LD4 is sent to Modules M7 and M8, which are current sensing modules for sidelights. Each SCR430T monitors one (1) level of sidelights, and will provide a contact closure along a visual indication if one (1) or more lamps fail.

6.3 **BEACONS**

Lines LD1, LD2, and LD3 are sent to Modules M1, M3, and M5. M1 is the primary flasher for Beacon #1, which provides control voltage to Modules M3 and M5, which are auxiliary flashers for Beacon #2 and Beacon #3. The output of these modules is sent to the primary of boost transformers T1, T2, and T3. The boosted output voltage (126V at 120V nominal input) is sent through the current sensing Modules M2, M4, and M6, then to the fuse outputs B1, B2, and B3. If Modules M2, M4, or M6 detect a lamp burnout, then that particular module would provide a contact closure along with a visual indication for that lamp circuit.

I.MANUALS.A-SER.AA23MB Rev. 10/02/98. Rev. 06-01-99 Rev. 09-30-99-Dwg.

Rev. 09/19/00-o2L/H & Dwgs.

Rev. 02/28/01 (Warranty) - Rev 03/21/03 (TWR Logo Dwgs)

Relays K3 – K5 are flasher failure relays for the Beacons B#1 – B#3. If Modules M2, M4, or M6 detect a flasher failure, then that particular module would provide a contact closure for that flasher circuit.

MAINTENANCE

MAINTENANCE 7.0

7.1 **RED OBSTRUCTION LIGHTING**

The only required maintenance needed to be performed is replacement of the lamps in the L-864 and L-810 fixtures. Lamps should be replaced after being operated for not more than 75% of the rated life or immediately upon failure as per Advisory Circular 70/7460-1J. By following these instructions, maximum safety and performance can be achieved.

TOOLS REQUIRED: NONE

7.2 L-864 LAMP REPLACEMENT

- 7.2.1 Loosen the one (1) wing nut on the latch pin so that it can recline.
- 7.2.2 Open the lens and tilt it back.
- 7.2.3 To remove each lamp, depress down while rotating the lamp counter-clockwise 90°.
- 7.2.4 Install the new lamps by depressing down while rotating the lamp clockwise 90°.
- 7.2.5 Close the lens and let the latch pin drop in the recessed slot.
- 7.2.6 Tighten the wing nut snug, then ¼ turn more.

Rev. 09/19/00-o2L/H & Dwgs.

7.3 LAMP REPLACEMENT

7.3.1 Unclasp the two (2) latches and let the bail recline back.

7.3.2 Lift the lens up and over the lamp, letting the lens hang

from the safety cable.

7.3.3 Unscrew the lamp counter-clockwise and remove.

7.3.4 Install the new lamp by screwing the lamp clockwise.

7.3.5 Reinstall the lens, making sure it is seated properly on the

base.

7.3.6 Reclasp the two (2) latches.

7.4 L-864 CONTROLLER

No scheduled maintenance is required. Perform on an "as

needed" basis only.

PHOTOCELL 7.5

The photocell is a sealed unit. No maintenance is needed or

required other than replacement as necessary.

I.MANUALS.A-SER.AA23MB Rev. 10/02/98. Rev. 06-01-99

TWR Lighting, Inc.

FAA Approved L-810 Single Obstruction Light Side Hub OL1

FM10018_RC.DWC

For use as an obstruction light on towers, building, bridges, cooling towers. Meets or exceeds all FAA specs as found in AC 150/5345-43 Type L-810.

Our most popular light. The side hub allows for a straight run of conduit from the junction box for hook up.
